GV Model 2200 Aux Bus Preview

When doing Aux Bus previews on the GV2200 switcher, the switcher will now switch between the R-VTR crosspoint and the crosspoint selected in Super Edit INIT #74. The default crosspoint is the output of M/E1 (crosspoint 049).

i.e. INIT #74 "AUX M/E XPT = 049"

To change this to M/E2, select INIT #74 and change the crosspoint from 049 to 050.
